## Our Factory

### Hand Craft And Technology

As we have often said before, our models are essentially "handbuilt" models made on specialized production lines. The assembly process is broken down into steps. Before assembly comes the production of a master pattern, often carved by hand with enormous skill.

After moulding of parts comes; pre paint finishing, painting, assembly of the many tiny parts and the application of decals or pad printing. The models can be, and are, made in a variety of materials including diecast metal, resin, ABS, steel and aluminium. We have no prejudice or preference as to diecast metal or resin or indeed any other appropriate material.

The word to stress here is "appropriate". We will always use the materials that we think bring the most accurate possible representation of a car in miniature in any given price range.

There has been a lot of nonsense both written and spoken about the relative merits of diecast metal and resin. We have seen excellent models in both materials from a variety of manufacturers. We have also seen mediocre and even bad models in both resin and diecast. For a longer discussion on this subject you can go to our website.
