Our Factory

Hand Crafting and Technology

As we have often said before, our miniatures are essentially "handbuilt" models made on specialized assembly lines. The process is broken down into steps. Before assembly comes the production of a master pattern, often carved by hand with enormous skill, or else produced from digital scans.

After the moulding of parts comes; pre-paint finishing, painting, assembly of the many tiny parts and the application of decals or pad printing. The models can be, and are, made in a variety of materials including diecast metal, resin, aluminium, ABS and photo etched steel. We have no prejudice or preference as to diecast metal or resin or indeed any other appropriate material. The word to stress here is "appropriate". We will always use the materials that we think bring the most accurate possible representation of a car in miniature in any given price range.

There has been a lot of nonsense both written and spoken about the relative merits of diecast metal and resin. We have seen excellent models in both materials from a variety of manufacturers. We have also seen mediocre or bad models in both resin and diecast. For a longer discussion on this subject you can go to our website.

Our aim is to always bring you the best possible models in their price range.
